

About Us

Unison Joints Pty Ltd is an Australian owned, Queensland based company, established in 2001 to manufacture and supply movement joint systems for the building and construction industry. Unison specialises in providing innovative products under the management of highly qualified professionals. Unison prides itself on implementing engineered, architectural solutions, sourced through sustainable means to achieve our customers' objectives.

Our Mission Statement

UNISON JOINTS will become recognised as the world's foremost joint manufacturer by our continuous improvement process and commitment to high performance cover plates, fireseals and waterseals, that last longer, work better and protect our client's reputations.

Our Services

A Wide and Varied Catalogue of Expansion Joint Systems

Our current product range includes Movement Joints designed to be easily integrated with various structural elements, both internal and external; all flooring & paving, walls, panels, ceilings, facades & roofs.

Supplied Fully Assembled for Faster Installation

Unison Joints is aware of the high cost of site labours. Simple assembly and presetting of floor expansion joint systems can reduce these costs significantly. An example is Unison SeiMax T (Si T) which is not only preset, but factory caulked, providing huge time savings.

Bespoke Designs- Customised Solutions For You

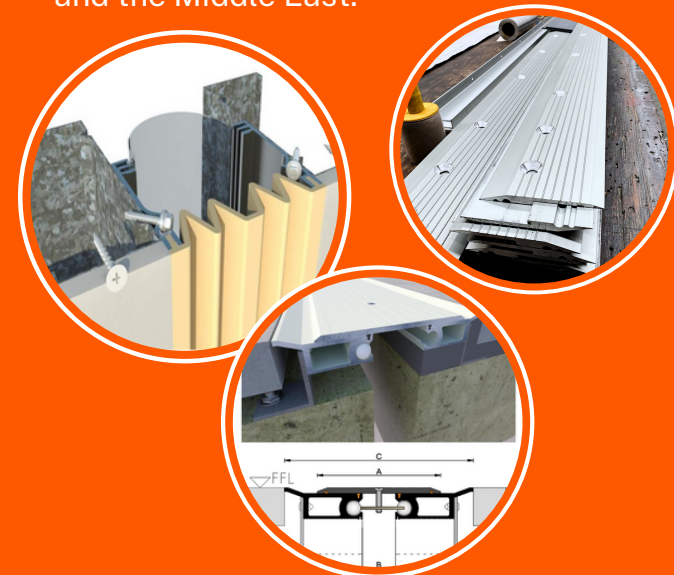

Approximately one third of our orders are bespoke designs- suitable for specific situations and client's requirements.

Unison's in house engineers provide product support and engineering design services to the construction industry. Unison offers a complimentary quantity survey service. Your floor plans are marked up and summarised. Suitable products can then be nominated accordingly.
